## GOVERNMENT CAPABILITY STATEMENT

### COMPANY OVERVIEW

Medelita is a small, woman-owned US company that provides state-of-the-art clinical and surgical apparel for the medical professional. Designed and created by a female clinician, these "scrubs" and lab coats offer performance fabrics such as Dri-release® with FreshGuard®, Advanced Dual Action Teflon® fabric protector, and High IQ® Easycare Plus technologies, which help to provide greater comfort to the clinician, are easier to clean and have vastly superior durability.

### PRODUCTS

#### Clinician Scrubs

The Medelita scrub style is quite simply groundbreaking. We've taken the 40-year-old unisex style scrub set and turned it upside down – for women. Features include women's sizing and shaping, a modern color palate, contoured waist detail, and flattering shape of the leg.

*Because scrubs are square and women are not™*

#### Lab Coats

Women's lab coats have needed an upgrade for some time. A female clinician lab coat differs from its unisex brethren in the flattering, feminine shape and improved functionality and durability found only in Medelita women's lab coats. Our lab coats have a beautifully soft, 100% cotton subtle textured fabric, modern rounded collars, and exquisite waist and pocket detail, both inside and out.

*Elevate your appearance™*

#### Men's Lab Coats

Our men's lab coats are technically superior to anything you've previously worn. Fluid resistant technology that repels blood and common stains, an ergonomic fit, well-proportioned pockets, and functional details you'll appreciate. Medelita Men's lab coats exude professionalism and accomplishment. Sophistication and confidence. All of this – to make you continuously comfortable and distinguished during each and every shift.

*Your lab coat = your suit™*

*Lab Coats*

*Clinician Scrubs*

*Professional Clogs*

## OUR FABRICS

medelita.

MM medelita. mens

What makes our products so special? The latest in fabric technology makes our scrubs and lab coats easy to wear and easy to maintain. An updated fit and modern patterns make our garments more comfortable in high-stress environments.

### drirelease® how Dri-release® improves your scrubs

- Dri-release is a patented moisture transport system that helps manage sweat — keeping you fresh.
- Medelita has created an exclusive Dri-release® fabric for healthcare.
- Dri-release® fabrics absorb moisture from the skin and release it into the air faster than any other performance fabric or cotton.
- Dri-release® performance won't wash out like other chemically treated fabrics, making it environmentally friendly.
- Dri-release® keeps its shape and retains its color wash after wash, as well as resists pilling and wrinkling-giving the garment a longer life cycle.
- Natural on-the-job perspiration won't discolor our Dri-release® fabrics — no embarrassing underarm stains.
- Dri-release® fabrics naturally repel annoying static cling — great for layering.

### FRESHGUARD® BY OPTIMER how FreshGuard® improves your scrubs

- FreshGuard® limits bacterial growth which eliminates odor, and is an added benefit of all Medelita scrubs.
- FreshGuard® is not an antimicrobial or bactericide, which kill bacteria — even those that possess positive functions.
- FreshGuard® is an odor neutralizer and is bacteriostatic which minimizes odors created by bacteria — so they don't build up in your scrubs.
- FreshGuard® neutralizes odors safely. It's friendly to the environment and maintains the natural balance of the skin.
- FreshGuard® is not a topical finish. It's built right into the yarn without harmful chemicals — and won't wash out.
- FreshGuard® helps to maintain your ideal level of confidence — during an 8 or 12 hour shift.

### how Advanced Dual Action Teflon® fabric protector improves your lab coat

- A perfect match with our lab coats — a repel and release technology that aggressively fights stains.
- Liquid spills (including blood) bead up and roll off, and any residue can be easily wiped away or blotted with a clean cloth.
- With a luxurious finish, DuPont™ Teflon® fabric protector maintains the softness of our 100% brushed cotton fabric.
- Water and oil based spills are repelled by an invisible molecular barrier around the individual fibers.
- Ground-in stains are quickly released during laundering or dry cleaning.
- Advanced Dual Action Teflon® helps to maintain a crisp, professional appearance.
- Teflon® is a registered trademark of DuPont used under license by Medelita.

### how High IQ™ Easy Care Plus improves your lab coat

- High IQ™ Easy Care Plus is a special high-tech finish that ensures a soft, smooth clean appearance.
- Found on all Medelita lab coats, High IQ™ Easy Care Plus helps to minimize wrinkling of the garment.
- Will help keep your lab coat looking newer — longer — and remain comfortable in use.
- Medelita lab coats retain their shape and original dimensions after cleaning, thanks to High IQ™ Easy Care Plus.
- The premium brand for increased comfort and a clean finish.
